OBJECTIVE

Recently i've decided to pursuit my dream of becoming a professional programmer: something i've been doing as a hobby since i was 13 years old.

I simply and absolutely love it, and now that i am financially stable, i can give myself the chance to make it happen.

The passion i have will definitely push me to do my best to achieve whatever barrier it's been set upon me, through fast learning and consistent dedication towards those goals.

EDUCATION

Business Administration   March 2004 - July 2008

Universidad de San Andres

- Studies in Business Administration (only lacking the final thesis) at Universidad de San Andres (Buenos Aires, Argentina).

First Certificate in English (FCE)   March 2003 - December 2003

Cambridge University

Also known as B2.

I've also taken an EF SET test with a score of 76/100 (C2 Proficient) level.
Link to the certificate: https://www.efset.org/cert/USqt9c

Web Development   January 2023 - March 2023

CoderHouse.com

Skills learnt during the course:
- HTML5
- CSS3
- Bootstrap 5
- SASS

JavaScript

CoderHouse.com

Fundamentals of JavaScript

Full Stack Developer

<div align="right">December 2022 - Present</div>

CoderHouse.com

Currently taking a course of Full Stack Developer at CoderHouse.com

WORK EXPERIENCE

Own Projects

<div align="right">January 2015 - December 2020</div>

Wordpress

Experience in setting up, developing and maintaining Wordpress sites; including:

- Online stores.
- Newspapers.
- Hotel with own booking system for customers.
- PC videogame store with automatic serial code release after successful payment gateway (using Mercado Pago API).
- Online movies website.

Arrimalo

<div align="right">March 2020 - September 2020</div>

Delivery System App

Developed a delivery system app for Google Play such as Uber Eats during the pandemic in 2020:

- Grabbed a code from the Internet and further developed new features (such as whatsapp notification to stores via CallMeBot after a new order arrival, schedulling orders at specific times, adding phone call options, etc).
- Rewrote the entire CSS code to beautify the site.
- Uploaded it to Google Play and made it publicly available.
- Hosted it and made the DB setup in my own server.

@MoraditaDevBot

<div align="right">August 2019 - Still Running</div>

Telegram Bot

Coded a Telegram Bot in Python that grabs information from several APIs and presents it to the user.
The bot shows the different dollar prices in Argentina, crypto prices andcountry risk index (Argentina).

It's been a project that has not taken me more than two weeks but the bot is still running 24/7 in a computer due to the amount of people who was asking me not to take it down.

Bot name in Telegram: @MoraditaDevBot
